

Equiplite™ AMH Line Keepers

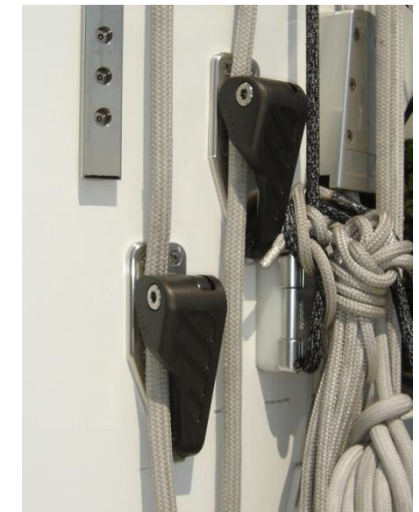

AES Line Keeper simple clamping device to hold the tail of the halyard tight

The line-keeper is a stopper used to fasten the halyard when there is no tension/workload on it (instead of an expensive jammer).

It is designed to attach large ropes over 20mm in diameter that are normally too big to fit into a rope clutch. It is a simple clamping device to hold the tail and keep the rope tight.

Line Keepers are used on super yachts for spare:

Mast top Gennaker halyards
Genoa halyard
Boom Topper
Topping lift

**High-strength material –
Less windage, impact resistant.**

The Line Keeper is made of high-tensile Hardkote anodized aluminum.
It is as compact as possible, and is unbeatable in its impact- and wear resistance.

Note: In the Line keepers the rope diameter squashes down with the holding force. For the soft ropes the reduction in diameter is much more extreme than the very hard ropes. In sizing for heavy use, SWL should be conservative.

All prices are retail prices in Euro.

All data approx and subject to change without notice.

Other sizes available on special order.

Unspecified dims. mm.
Break load approx. 1.8 to 2 x SWL.

Use recommended line size
